Chrome:

Instructions were provided here

https://support.google.com/chrome/answer/2693767?hl=en

But given that the pop-up blocker might block the the Allow/Block Pop-Up (Mine did not):

1) I made this quick video on what to click on: https://www.screencast.com/t/7ONjo3nl

2) Open chrome://settings/content/microphone?search=microphone in the Browser

Make sure that after following the above, https://us.bbcollab.com was added to the list.

Actual steps:

1) Launch the session

2) Click on the camera on the Top Right

3) Always Allow https://us.bbcollab.com to access microphone.

Firefox:

https://www.screencast.com/t/gZAPSeVdjxW

1) When the Session Opens, there were no popups for Microphone Permissions

2) Click on the Microphone Option next to the Lock in the URL Bar

3) If the Microphone was already disabled, follow these steps:

- Right-click a blank area of the page and choose View Page Info > Permissions
- Scroll down to the bottom "Use the Microphone"
- Uncheck "Use Default" and set to Allow".

These options should not be blocked by the Pop-Up browser, but the options above should work for everyone.

** Please note that there is currently the bug with Firefox 61/62 (https://blackboard.secure.force.com/apex/publickbarticleview?id=kA33900000006ff)

The Microphone does not currently work in Firefox and is still being patched by Mozilla.

Internet Explorer:

I couldn't find a way actually control this within the Browser on IE11.

It appears to be controlled by Windows.
https://help.blackboard.com/Collaborate/Ultra/Moderator/Support/Flash-based_Browser_Support?utm_source=Ultra&utm_medium=Collaborate&utm_campaign=Product_link&utm_content=Moderator

1.On Windows® open your Control Panel. On Mac® open your System Preferences.

2.Select the Flash® player. (Search Flash is easiest)

3.Select Camera and Mic.

4.Select Camera and Microphone Settings by Site.

5.Select Add and type the Collaborate domain: us.bbcollab.com

6.Click on the us.bbcollab.com row > Under HTTPS > Allow

7.Other > Allow as well.

Edge: This is the same as IE11.

For Steps, see above.

Safari:

Safari is a Flash Based Browser as well.

The best steps I could find for this were here:

https://mil-tokyo.github.io/webdnn/docs/tips/safari_webcam.html

It's basically the same thing as IE/Edge but on a Mac Computer.
